

Market study for hydropower investments

Technical and financial overview and assessment of realistic investment opportunities in hydropower generation in Norway and Sweden for a foreign client.

The study also provided practical suggestions on next steps for acquisition and/or greenfield investments. The delivery included a presentation of the current status and the expected development of the Norwegian and Swedish hydropower markets, together with profitability of Norwegian hydropower potential; player profiles; business strategies; and regulatory aspects, taxation and legal limitations.

SCOPE OF WORK

- Overview of status and outlook for the Norwegian and Swedish electricity sectors
- Presentation of relevant hydropower potentials in Norway and Sweden
- Technical and cost assessments of different investment opportunities in the sector
- Financial assessment of the different investment opportunities, including recommendations
